

Benefits for Students and Parents

The major benefit of MathsBuddy for students is that there is a “Video Tutorial for Every Maths Concept” in the NZ curriculum, which means that any student can learn at their own pace by:

- rewinding, fast forwarding and repeating the lesson, as needed
- stopping, reflecting, asking questions and absorbing the content in their own time
- being able to revise and catch up on missed work easily, with the whole of the NZ Mathematics curriculum (years 1 – 13) available to them and
- identifying knowledge shortfalls from prior years and address them so that progress can be made
- having access to help anytime, anywhere and on any device i.e. computer, iPad and other tablets and electronic devices

For parents, the benefits include being able to:

- have immediate access to the same information about your child’s progress as the teacher
- receive weekly reports on your child’s progress
- be fully involved in the Mathematics education and progress of your child
- work closely together with the school and the teacher to ensure your child’s success.
